

# CryoSafe Regulator Check

**CryoSafe Regulator Check** is an inspection and test service for gas control equipment supplied by CryoService or used in conjunction with our special gases and mixtures.

BCGA (British Compressed Gas Association) Guidance Note GN7 recommends that regulators are **routinely replaced and/or refurbished every 5 years** and **CryoSafe** is the cost effective way of meeting compliance.

## CryoSafe Features

Each regulator is inspected and tested against a written scheme of examination and all tests are performed using a rig specifically designed for the purpose under controlled and safe conditions. Upon completion a **CryoSafe** certificate is issued testifying to a clean bill of health and where necessary detailing any components that have been replaced. Regulators deemed to be beyond economical repair can be replaced as required. All checks and tests are performed by qualified, experienced technicians. CryoService can arrange collection and return of regulators to your premises.

## CryoSafe Procedures

- Detailed visual examination for signs of wear and tear.
- Leak testing of all major components and attachments.
- Function check under simulation of extreme operating conditions.
- Calibration of gauges.
- Pressure safety check at maximum operating conditions.

## CryoSafe - The Benefits to You

- Hassle free and cost effective way of complying with current and relevant industry guidelines.
- Faulty equipment or components are identified before they become a safety hazard.
- Keeps gas control equipment in prime condition - essential in preventing poor system performance when used in conjunction with highly accurate calibration gases.
- Clear and economical pricing - the same **CryoSafe** charge applies to single stage, twin stage and Dial-a-Flow regulators.

To find out how little it costs to keep your regulator fleet in tip-top condition call CryoService on **01905 758211** or complete the **CryoSafe Regulator Check** faxback form overleaf.

| 3                  | Replacement BS3 or BS4 nut & Stem*   | 23.00                           |          |                            |
| 4                  | Replacement BS14 or BS15 nut & Stem* | 38.25                           |          |                            |
| 5                  | Replacement Pressure Gauge(s)*       | 36.35                           |          |                            |
| <b>Order Value</b> |                                      |                                 |          |                            |

\*To keep servicing costs to a minimum **CryoSafe** prices do not include replacement external parts so these are purchased additionally but only when needed. In the event they are required you will be notified by CryoService for permission to proceed before the cost of the items is added to your invoice.

Other nut and stem connections eg. DIN and/or CGA are available on request. **CryoSafe** service can be extended to include fitting of Quick-Connect couplings. Please ask a Special Gases and Mixtures specialist for details.

CryoService aim for a maximum 10 working day turnaround with **CryoSafe** and use an express courier service for collection and delivery.
